room, and we have had accidents there, and by the way, in reference to those accidents, the accidents of which we have had records, are not the only accidents that have happened there; for instance, a person cuts a finger; that is an accident, we give first aid to the injured in the office, and we don't have any report on that, the only reports we have are of those accidents that incapacitate the health, where they demand the money for the time that they have lost due to the accident, and we will have our Employers' Liability Insurance Company to pay the employees, but where people just cut their fingers and they go back to work, we don't make any record of that, and we have people cutting their fingers there very often, and when they cut their fingers, their line of travel is right by that place where Mr. Barrett found those spots, right to the office. Now, we use paint and varnish around there, a great deal of it, and while I don't say that this is not blood, it may be, but it could also have been paint, I have seen the girls drop bottles of paint or varnish and have them break there on the floor, I have seen that happen right close to that spot, but the main point about it is this, gentlemen; when I got down and looked at it, you could have scratched away from the top of those dark stains an accumulation of dirt that was not the accumulation of a day or two days or three days or three weeks, but it was at least three months, from off the top of those spots, without touching the spot itself. Moreover, that white stuff was unquestionably, in my opinion, kaskoline compound, and it was dry and it had to be put on, because it showed all evidences of having been swept, so it had to be put on the wood in a liquid state; if that had been fresh red paint, or if that had been fresh red blood, and

~~that kaskoline compound that goes in it which is a great~~
